

Investing in our Downtown

100 Street Corridor Construction Bulletin

Beneath 100 Street, the 80-year-old water, sanitary, and storm sewer pipes need replacement. On the surface, the entire roadway and sidewalks will be reconstructed to reflect a high-quality urban design to match the vision created during the 100 Street Corridor Plan Design Charrette that took place in 2019.

You will see features such as:

- Wider sidewalks to accommodate pedestrians and winter snow management
- Boulevard trees with an automated irrigation system
- New benches and furnishings
- Decorative lighting which improves visibility, but also helps create a safer street
- Left-hand turn lanes to make vehicle movements easier
- Dedicated space for roadway snow storage

ASPHALT REMOVALS

UNDERGROUND UTILITIES INSTALLATION

Week of June 6, 2022 Update

Since construction started on April 10, 2022, the following activities have occurred:

- Site excavation and removal of existing asphalt, concrete, street lighting and traffic signals
- Replacement of underground sanitary and storm sewer systems
- Installation of catch basins and manholes
- Replacement of underground water main and water main tie-ins
- Sub-base preparation

Work planned for the reporting next period

- Continued sub-base preparation
- Water service connections to properties
- Electrical duct installation
- Silva-cell excavation and installation
- Screw pile installation for street lights and traffic signals

Sidewalks (as of June 6)
